## Collective Code Construction Contract

A protocol for community around building accurate software

42/C4

### Collective Code Construction Contract

status **stable**

- Status: stable
- Editor: Pieter Hintjens [ph@imatix.com](mailto:ph@imatix.com)

The Collective Code Construction Contract (C4) is an evolution of the [github.com Fork + Pull Model](#), aimed at providing an optimal collaboration model for free software projects. This is revision 2 of the C4 specification and deprecates RFC 22.

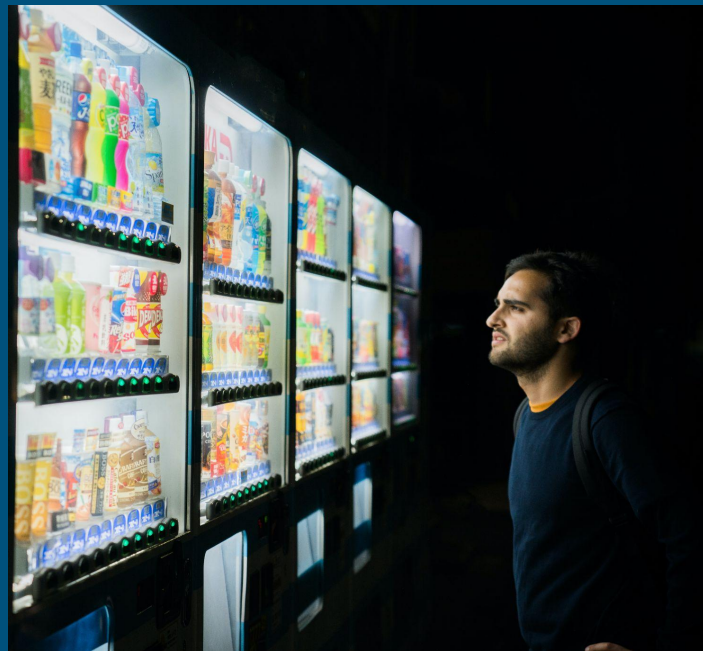

# Accuracy in software

---

Success in a market

Fediverse is a collection of markets, instances, pods, communities

Creating options that are easy for markets to try

# Community

---

tHE MoST imPoRtanT thINg

Software without community has no life.

Diversity: all skill levels, backgrounds, use cases, languages, technologies

# C4 Details

---

Community-first

Focus on problems & accept solutions freely

Use automation and free platforms

Here are the rules, play alone or in groups

# Problem-centric

---

Break-fix

What problems?

Solutions come as patches

# Solutions get merged

---

Simple and small is encouraged

If it addresses a valid problem, a patch gets merged

Respecting the creative

Don't like it? Submit your own patch and it'll get merged too.

# C4Social

---

Problems we're solving...

- Not enough developers
- Not enough competition/experimentation -> tooling

# Thank you

---
